

ECOTAPE

ЕСОТАРЕ Т380-30

ECOTAPE T380-30 is a cold applied tape coating for anticorrosion / mechanical protection of field joints, fittings and pipes. The adhesive is crucial in its ground performance characteristic coupled with the polyethylene backing.

This tape is applied by hand or using a wrapping machine.

Cold applied Anticorrosion Protection.

- Composition:
 - Adhesive: Butyl rubber
 - Inner Release Paper
 - Outer Layer: Special blend of PE

DESCRIPTION

Specifically designed for applications on site or mill, at new line construction or for reconditioning existing metallic pipes.

The adhesive's special composition means the tape adheres to the pipe by itself. Use of Primer P-29 is therefore not necessary (Only for ECOTAPE models T380-30 and T3100-40. Not valid for other models).

The aim of this system is to reduce the effects of corrosion and the natural deterioration of metallic pipes in buried and submarine pipes, achieving an interface between the pipe and its surroundings, thus protecting it.

- GUARANTEE OF PROTECTION
- EASY APPLICATION
- LONG LIFE
- ECONOMICAL.
- COMPATIBLE WITH COATINGS:
 PE, PP,PU, FBE,CTE...

ECOTAPE SERIES T380-30

- Heavy duty adhesive.
- Good conformability.
- Conformable to irregular shapes.
- UV resistant.
- Consistent uniform thickness.
- Meets ASTM D 1000 Standard.
- Can be applied over a broad temperature range.
- Easily applied with no special equipment.
- Cold applied.

ssary (Only id for other
